TECHNICAL BULLETIN

This bulletin is available to selected partners on a confidential basis. The bulletin will advise you of all known changes since the last update. Program Version is **F59A**. Note that this bulletin contains details of changes since last Technical Bulletin, entries flagged as (V6) also applied to the older V6 program version.

Important Note—these programs will <u>not</u> run without a security file registration number **70xxxx.** Also remember that if using new Word / Mail links that Outlook and Word must be closed, as well as Datafile, before updating programs.

Edition No 95   May 2017

Number	Application	Description
9501	**Sales/ Purchase**	**Scanning in Direct Transaction Entry** If scanner offline during scan processing the system would report an ETWAIN error. Will now continue to report an error but exit without the exception error.
9502		**Automatic Payments / Update to Nominal** The Automatic Payment Generation options didn't allow the ability to update the payments to nominal as part of the real-time updating parameters (allowing for the payments to be updated in summary for bank reconciliation). Option now added to the P/L Application User Facilities to update these payments as required.
9503		**Prompt Payment Discount / No VAT** If purchase invoice didn't include any VAT then if edited the PPD value the system didn't apply the rounding value checks against the header and analysis transactions. Also updated for Invoicer / POP. (V6)
9504		**CIS Submissions** If submitting CIS Returns to HMRC then the difference in string handling between V7 and 2017 would mean that the system would report an error in the validation process for date items.
9505	**Stock Control**	**Supplier Accounts—Locks on PLA Database** When updating stock records the system uses the PLA as a lookup for the supplier account entry but didn't place a U-Usage lock on the database.
9506	**Payroll**	**Earlier Year Update** Changes have been made to the Earlier Year Update for 16-17 to remove the references to ECON/SCON references. (V6)

9507	**Payroll**	**Company Pension and the UEL** If pension contributions set to be calculated on earnings up to the UEL this limitation was not applied (V6)
9508	**Order Processing**	**Invoice Production—Sales Account Alerts** When an SOP Invoice updates the account it first updates the account balance and then reduces the outstanding order value. If an email alert configured on the sales ledger comparing credit limit against balance plus outstanding orders then the alert could be triggered incorrectly due to this two pass update. Now changed to check for alert trigger after second update.
9509		**User Accumulation Items** If set to accumulate a calculated value based on the order quantity to the SOH (such as O/S Delivery) then if set to default the order quantity to '1' for new lines the accumulated value was the variance from 1. (V6)
9510	**Bill of Materials**	**Works Order Generation from Sales Orders** If the assembly specification contained Operation entries the system didn't update the operation items on the Order Header when creating works orders from sales orders (V6)
9511	**ProFiler**	**Screen Action Edit Pick** If rapidly move up/down pick list then the edit pick entry could get out of synch with the highlighted record.
9512	**General**	**Document Layouts—Image Print** Some printers do not support the standard StrechDraw commands when inserting images and would then show a border on an inserted jpeg. An alternative method for inserting images now deployed.
9513		**Landing Grid Updates** If the Find panel displayed on a landing grid was possible to get a TypeCast error on return from a grid action. The individual user settings for the landing grid are saved in a definition file based on the user name. If the user name contained characters that are invalid for a file name then could report an error on display. The Formulae builder options now offers auto-complete on entry of data item names and allows for Boolean fields (Y/N) to be tested as True/False. The Action Panel will now support direct calls to the Databases on Desktop (Alt+B) and Database Plus (Alt+Y) actions. If the landing page included a calculated field forced to 4dp then the value displayed to 2dp incorrectly. Filter options now no longer case sensitive.

9514	General	**Spool Files—Access for Other Users** If current user is authority level 0 then when access Spooled Reports prompted for the user to view. If enter a user id ending in a number then the system could report that user not found incorrectly.
9515		**Company Selection** If typed the company code value in when use the Alt+O Company Selection option the system would focus on the entry within the grid but not auto-select requiring you to select from the grid (also change for ProFiler application selection).
9516		**Clearing SYSXML.DAT** Options to clear the SYSXML file and associated communication XMLs would clear the polling messages but not the SYSXML log file itself—will now clear the log file also (V6)
9517	Sign On	**Hide User Id** The option to hide the user-id when entering wasn't applied to the new sign-on screen.
9518		**Maximum User Id / Password Length** On sign-on the system didn't restrict the characters that could be entered based on the maximum allowed (6 and 10 characters respectively)
9519	Manager	**Document Design Default Fonts** The ribbon didn't allow access to the Default Font settings for the document header area.
